RentFit – AI-Powered Clothing Rental Marketplace

Project Overview

RentFit is a fashion rental marketplace that combines:

- **Myntra's premium shopping experience**
- **OLX's person-to-person rental model**
- **Lenskart-style AI Virtual Try-On**

Unlike traditional e-commerce platforms, **RentFit does not handle payments, deliveries, or rental agreements.** The platform only connects people who want to rent clothes with people who own them.

Business Model

RentFit acts only as a marketplace.

The platform allows users to:

- List clothes available for rent.
- Discover outfits near them.
- Contact the owner.
- Try the outfit virtually using AI before visiting.

After both parties connect, **all further discussions happen directly between them.**

This includes:

- Rental price negotiation
- Security deposit
- Identity verification (Government ID if required)
- Pickup location
- Return date
- Payment method (Cash, UPI, etc.)
- Any damage or loss agreement

These terms are entirely between the owner and the renter.

Example Flow

Owner (Y)

1. Creates an account.

2. Uploads photos of the outfit.
3. Adds:
4. Price per day
5. Available sizes
6. Location
7. Description
8. Availability dates
9. Publishes the listing.

Customer (X)

1. Opens RentFit.
2. Searches for an outfit.
3. Filters by city, size, occasion, and budget.
4. Uses AI Virtual Try-On to see how the outfit looks.
5. Clicks **Contact Owner**.
6. Chats or calls the owner.
7. Visits the owner's location.
8. Verifies the outfit.
9. Pays the owner directly.
10. Collects the outfit.
11. Returns it on the agreed date.

AI Virtual Try-On (USP)

Inspired by Lenskart.

The feature lets users see how a dress, saree, suit, or other outfit would look on them before meeting the owner.

Workflow

Upload a selfie or full-body photo

↓

Choose an outfit

↓

AI detects:

- Face
- Body shape

- Height
- Pose
- Body proportions

↓

The selected outfit is digitally fitted to the user's body.

↓

The user can:

- View front and side angles
- Compare multiple outfits
- Save favourite looks
- Share previews with friends

Platform Features

Customer

- Browse clothes
- Search by city
- Advanced filters
- AI Virtual Try-On
- Wishlist
- Contact owner
- Save favourite outfits
- Report fake listings

Owner

- Upload outfits
- Add multiple images/videos
- Set rental price
- Manage availability
- Edit listings
- Receive customer enquiries
- Manage active and completed rentals

Admin

- Verify users
- Moderate listings
- Remove fake or inappropriate content
- Handle user reports

- Manage categories
- View platform analytics
- Block fraudulent accounts

What the Platform Does NOT Handle

The platform does **not**:

- Process online payments
- Collect commissions
- Manage delivery or shipping
- Hold security deposits
- Verify government IDs
- Mediate rental disputes
- Guarantee the condition of items

These responsibilities remain entirely between the renter and the owner.

Technology Stack

Frontend

- React.js / Next.js
- React Native

Backend

- Spring Boot
- REST APIs

Database

- MySQL
- MongoDB

Storage

- Cloudinary / AWS S3

AI

- Virtual Try-On
- Pose Detection
- Body Segmentation
- Outfit Overlay

Future Enhancements

- In-app messaging
- Owner verification badges
- Location-based search
- AI size recommendation
- Outfit recommendations
- Reviews and ratings
- Boutique partner accounts
- Optional escrow/payment integration (future phase)

Project Goal

Build a modern clothing rental platform where people can easily rent fashion from nearby owners with confidence. The platform combines a premium shopping experience, AI-powered virtual try-on, and a peer-to-peer rental model while leaving payments and agreements entirely to the users.
